Three phyla | AA | 30-tip pruned display (not re-inferred)

Outermost bars: original, unaligned FAA protein length (aa); zero-based linear scale 0-3000 shared by AA and 3D1. Black dots: original 558-tp SH-aLRT ≥ 80 and UFB00 ≥ 95 ; not recalculated. Support on merged paths omitted. Retained pairwise distances are unchanged. This is pruning for display, not new phylogenetic inference.
