

MCP detection by protein length

V0.1 recipe · Train-only internal cross-fit · Original protein lengths

331/336

MCPs detected

5

MCPs missed

Length / aa	Recall	Detected / MCP	Missed
<250	Recall not estimable No MCP positives	No samples	—
250–299	100.0%	13/13	0
300–349	93.3%	14/15	1
350–399	100.0%	38/38	0
400–449	97.4%	75/77	2
450–499	100.0%	71/71	0
≥500	98.4%	120/122	2

■ Detected ■ Missed Bars span 100%; counts show actual sample sizes.

0 / 6,298 false positives overall. Per-length specificity is retained in the supplement.
Only 13 positives at 250–299 aa; perfect observed recall is not a population guarantee.
95% intervals and V0 comparisons are in the supplement. Validation/Test remain unscored.
